

The Model 75A250A amplifier is a portable, self-contained, air-cooled, broadband, solid state amplifier unit designed for laboratory applications where instantaneous bandwidth, high gain and moderate power output are required. Utilization of push-pull MOSFET circuitry lowers distortion, improves stability and allows operation into any load impedance without damage. When used with an RF sweep generator, the 75A250A will provide a minimum of 75 watts of swept RF output power.

The Model 75A250A includes a front panel RF Gain Control, which permits the operator to conveniently set the amplifier's desired output level. Housed in a stylish contemporary enclosure, the unit provides instantaneous power for typical applications such as RF susceptibility testing, antenna and component testing, Watt-meter calibration and as a driver for higher power amplifiers. The 75A250A is powered by a high efficiency switching supply, with autoranging AC input circuitry which will automatically accept voltages from 90 to 135 VAC, or from 180 to 270 VAC, in the 47 to 63 Hz frequency range. The RF Amplifier stages are protected from over temperature by removing the DC voltage to them if an over temperature condition occurs due to a cooling blockage or fan failure. The digital display on the front panel indicates the operation status and any pending fault conditions when an over temperature or power supply fault has occurred. The unit can be returned to normal operation when the condition has been cleared; as with the other functions, this can be readily accomplished through a front panel switch. The unit also includes digital control for both local and remote control of the amplifier. The 8-bit RISC microprocessor controller board provides IEEE-488 (GPIB) and asynchronous full duplex RS-232 communication control of all amplifier functions.

75A250 TYPICAL POWER OUTPUT

SPECIFICATIONS
Model 75A250A

POWER OUTPUT, CW
Nominal 100 watts
Minimum 75 watts
Linear @ 1 dB compression 50 watts minimum

FLATNESS ± 1.0 dB maximum

FREQUENCY RESPONSE 10 kHz - 250 MHz instantaneously

INPUT FOR RATED OUTPUT 1.0 milliwatt maximum

GAIN (at maximum setting) 49 dB minimum (See model configurations)

GAIN ADJUSTMENT (continuous range) 18 dB minimum

INPUT IMPEDANCE 50 ohms, VSWR 1.5:1 maximum

OUTPUT IMPEDANCE 50 ohms, VSWR 2.0:1 maximum

MISMATCH TOLERANCE 100% of rated power without foldback. Will operate without damage or oscillation with any magnitude and phase of source and load impedance. (See Application Note #27)

MODULATION CAPABILITY Will faithfully reproduce AM, FM, or pulse modulation appearing on the input signal

NOISE FIGURE (above 1.0 MHz) 16 dB typical

HARMONIC DISTORTION Minus 20 dBc maximum at 50 watts

THIRD ORDER INTERCEPT POINT 57 dBm typical

PRIMARY POWER 90-135/180-270 VAC
47 to 63 Hz, single phase 400 watts maximum

CONNECTORS
RF (Type) Type N female
(Location) See Model Configurations table below

REMOTE CONTROL
IEEE-488 24 pin female
RS-232 9 pin subminiature D (female)

REMOTE INTERLOCK 15 pin subminiature D

COOLING Forced air (self contained fans)
