

Leading Features

Oscilloscopes

- 6, 5, or 3 GHz bandwidth
- 20 GS/s on all four channels (8620A only)
- 10 GS/s sampling rate (20 GS/s dual channel mode)
- All-SiGe front end (up to 75 ps rise time)
- 1 ps rms jitter noise floor
- 1 ppm internal sample clock
- X-Stream Technology data transfer is 10–100X faster than other DSOs
- Customizable add your own measurements or functions (VBScript, MATLAB, Mathcad, or Excel) using the optional XMAP software package
- < 2.5 ps rms trigger jitter</p>
- SiGe trigger circuit
- 10.4" TFT SVGA color display
- 100Base-T Ethernet
- Intuitive GUI
- Win2000 O/S

WaveMaster oscilloscopes include an all-SiGe front-end, X-Stream Technology, and extensive customization features. The 8620A model, shown here, has a 20 GS/s per channel sampling rate.

Maximum Performance

The WaveMaster® oscilloscope is designed to meet next-generation research and development needs. It is the only high bandwidth scope to include an all-SiGe front end for highest signal fidelity, to use unique X-Stream Technology, to provide fast display updates (up to 100X faster) of your analysis, and to provide the ability to customize the scope with your own measurements or functions. Imagine the power this provides to solve your unique problems and to speed product development. In addition, the WaveMaster DSO contains a SiGe trigger circuit for maximum trigger sensitivity at high bandwidths, and extremely low (< 2.5 ps) trigger jitter. A high stability (1 ppm) internal sample clock ensures the most precise timing measurements. Capture up to 2 Mpts with standard memory, or upgrade to longer memory (up to 48 Mpts) to enable debug and design characterization of complex or rare occurrences in long-duration signals. The 8620A offers a realtime sampling rate of 20 GS/s per channel for unmatched DSO performance. LeCroy's extensive measurement and analysis tool sets, combined with innovative and intuitive displays, make complex WaveShape Analysis simple.

Maximum Benefits

The high fidelity all-SiGe front end is ideal for use with the fastest, highest bandwidth requirements. Users making timing measurements will appreciate the low trigger jitter and superior timebase stability. The high resolution (800x600 pixel) display, and 20% larger viewing area allow for crisp, clear display of signals. Our unique "Histicons" (small images showing live statistical variations in measurements) enable you to find signal problems you weren't even aware of.

Probing Solutions

The WaveMaster line is fully compatible with LeCroy's wide assortment of passive and active, single-ended and differential probing solutions, including the new WaveLink family of probes. When used in conjunction with the 7.5 GHz D600 active differential probe, for instance, the 8620A offers 6 GHz system bandwidth at the probe tip. The WaveLink probes also provide the lowest circuit loading and smallest attenuation of any high bandwidth differential probe. Together, WaveMaster and WaveLink provide the highest performance scope/probe combination available.

Oscilloscopes

Unprecedented

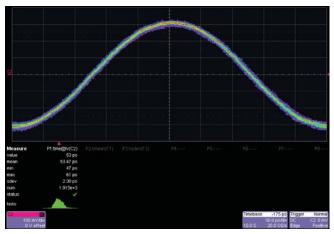

The precision and fidelity of the WaveMaster front end is unprecedented in a real-time oscilloscope. LeCroy has delivered the first product to truly meet the needs of high-speed digital designers with a combination of exceptional front end, trigger, and timebase performance, together with long memory, X-Stream Technology, and the first true ability to customize your scope to your exact needs.

Measurement Accuracy – Stable and Precise

The WaveMaster oscilloscope delivers superior timebase performance and the lowest jitter noise floor of any DSO. The most advanced jitter characterization and analysis is possible with the WaveMaster scope's 1 ps rms jitter noise floor and exceptional timebase stability (+/-1 ppm clock accuracy) for short and long record lengths. In addition, very low trigger jitter (< 2.5 ps) contributes to the ease and accuracy of acquiring high-speed signals. A front end that supports a rise time as fast as 75 ps, enables measurement of the fastest signal edges, with high signal fidelity.

Exceptional Trigger Performance

The WaveMaster SiGe trigger circuit delivers the fastest trigger capability on the market, with a 5 GHz edge trigger bandwidth for capturing fast signals, and superior trigger sensitivity at high bandwidths. The versatile SMART Trigger® captures a variety of signals, including glitches and pulse widths down to 600 ps. The logic trigger makes it easy to trigger on a pattern of up to 5 inputs, or to qualify on 4 signal inputs and trigger on the 5th.

A 2 GHz sine wave input with persistence "on" demonstrates the exceptionally low trigger jitter on WaveMaster scopes.

X-Stream Technology

X-Stream should be a standard feature in every DSO, but it is only available in WaveMaster. X-Stream makes processing of waveform records up to 100X faster than other scopes. Imagine having the ability to see deep memory calculations updated quickly on the screen, and getting fast insight into the source of problems. Innovative views like "Histicons" help you identify signal problems without slowing down your display update. Why would you accept anything less? Leave outdated "viewing" technologies behind and upgrade to X-Stream.

True Customization

Only the WaveMaster DSO provides the ability to create your own parameter measurements or math functions in the scope's user interface. Unique or proprietary MATLAB, Mathcad, VBScript, or even Excel calculations can be simply selected like any other LeCroy-installed parameter or math function, and the results displayed on the scope screen. It's that easy! Since the resulting waveform is inserted back into the X-Stream processing flow, cursors, measurements, and math can be performed on it, giving much more power and flexibility than a simple export of data to a third party program. LeCroy's advanced features also provide the ability to program the scope using ActiveX Automation language, embedded scripts, and other open Windows features, to create a scope that meets your specific needs. Why accept only connectivity when you can have true customization?

A user-created MATLAB low-pass filter is easily inserted as function F1 in the WaveMaster user interface.

Cursors

LeCroy has responded to demand from oscilloscope users for dedicated cursor knobs and a very flexible selection of cursors. Different cursor modes are easily recalled and set. You can access them from the front panel or the graphical user interface.

User Interface

The familiar scope controls on the front panel, coupled with a natural, context-sensitive graphical user interface, react quickly to your commands. Functionality is exactly where you expect it to be. If you have questions, the context-sensitive on-line help gives immediate assistance.

Oscilloscope Specifications (continued)

Vertical System*	WaveMaster 8620A	WaveMaster 8600A	WaveMaster 8500A	WaveMaster 8300A
Analog Bandwidth @ 50 Ω (-3 dB)	6 GHz	6 GHz	5 GHz	3 GHz
Rise Time (typical)	75 ps	75 ps	90 ps	150 ps
Input Channels			4	
Bandwidth Limiters	25	5 MHz; 250 MHz; 1 GHz 3 GHz; 4	GHz	25 MHz; 250 MHz; 1 GHz
Input Impedance		50 Ω ±2.0%		
Input Coupling		DC, GND		
Maximum Input Voltage		±4 Vpeak		
Channel-Channel Isolation	≥ 100:1	at 2 GHz; ≥ 40:1 at 3 GHz; ≥ 20:	1 at 4 GHz;	
Vertical Resolution	8 bits; up	to 11 bits with enhanced resol	ution (ERES)	
Sensitivity		2 mV – 1 V/div fully variable		
DC Gain Accuracy		±1.5% of Full Scale		
Offset Range	2 mV – 19	94 mV/div: ±750 mV; 195 mV –	1 V/div: ±4 V	
Offset Accuracy	±(1.5% o	of full scale + 1.5% of offset va	lue + 2 mV)	

Horizontal System

Tiorizoniai System	
Timebases	Internal timebase common to 4 input channels; an external clock may be applied at the auxiliary input
Time/Division Range	20 ps/div – 10 s/div
Math & Zoom Traces	4 independent zoom and 4 math/zoom traces standard; 8 math/zoom traces available with XMAP (Master Analysis package) or XMATH (Advanced Math package)
Clock Accuracy	≤ 1 ppm @ 0–40 degrees C
Time Interval Accuracy	≤ 0.06 / SR + (1 ppm * Reading) (rms)
Sample Rate & Delay Time Accuracy	±1 ppm ≤ 10s interval
Jitter Noise Floor	1 ps rms (typical)
Trigger & Interpolator Jitter	≤ 2.5 ps (typical)
Channel-Channel Deskew Range	±4.5 ns
External Timebase Reference	100 MHz; 50 Ω impedance; applied at the rear input
External Clock	30 MHz – 2 GHz: 50 Q impedance; applied at the auxiliary input

Acquisition System

/ tequisition by stem				
Single-Shot Sample Rate/Ch	20 GS/s		10 GS/s	
2 Channel Max		20 GS/s		
Random Interleaved Sampling (RIS)	200 GS/	s for repetitive signals: 20 ps/div	r – 1 μs/div	
Maximum Trigger Rate	150,000 wavefo	rms/second (in Sequence Mode	e, up to 4 channels)	
Intersegment Time		≤ 6 µs		
Maximum Acquisition Points/Ch	4 Ch	(2 Ch) / (4 Ch)	Duration @ 20 GS/s	Segments (Sequenc
Mode)

XXL – Memory Option	N/A	100M / 50M	5.0 ms	25,000 Segments

^{* 8620}A and 8600A bandwidth and rise time specifications are for sample speeds \geq 20 GS/s

Oscilloscope Specifications (continued)

Averaging	Summed Averaging to 1 million sweeps; Continuous Averaging to 1 million sweeps
Enhanced Resolution (ERES)	From 8.5 to 11 bits vertical resolution
Envelope (Extrema)	Envelope, floor, roof for up to 1 million sweeps
Triggering System	
Modes	Normal, Auto, Single, and Stop
Sources	Any input channel, External, Ext X10, Ext/10, or line; slope and level unique to each source
	(except line trigger)
Coupling Mode	DC
Pre-trigger Delay	0 – 100% of horizontal time scale
Post-trigger Delay	0 – 10,000 divisions
Hold-off by Time or Events	Up to 20 s or from 1 to 99 999 999 events
Internal Trigger Range	±5 div from center
Max Trigger Frequency	5 GHz w/Edge Trigger; 750 MHz w/SMART Trigger
	(8300A = 3 GHz w/Edge Trigger, 750 MHz w/SMART Trigger)
External Trigger Input Range	Aux (±0.4 V); Aux X10 (±0.04 V); Aux / 10 (±4 V)
Trigger Sensitivity (Edge)	3 Divisions @ 5 GHz, 2 Divisions @ 4 GHz, 1.2 Divisions @ 3 GHz (Typical)
Basic Triggers	Triggers when signal meets slope and level condition.
Edge/Slope/Line	ringgers when signal meets slope and level condition.
SMART Triggers	rriggers when signal meets slope and level condition.
	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events.
SMART Triggers	Triggers on any input source only if a defined state or edge occurred on another input source.
SMART Triggers State or Edge Qualified	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input)
SMART Triggers State or Edge Qualified Dropout	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently.
SMART Triggers State or Edge Qualified Dropout	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input)
SMART Triggers State or Edge Qualified Dropout	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern.
SMART Triggers State or Edge Qualified Dropout Pattern	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern.
SMART Triggers State or Edge Qualified Dropout Pattern SMART Triggers® with Exc	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern.
SMART Triggers State or Edge Qualified Dropout Pattern SMART Triggers® with Exc	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern. Lusion Technology Triggers on positive or negative glitches with widths selectable from 600 ps to 20 s or on intermittent faults
SMART Triggers State or Edge Qualified Dropout Pattern SMART Triggers® with Exc Glitch Signal or Pattern Width Signal or Pattern Interval	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern. Lusion Technology Triggers on positive or negative glitches with widths selectable from 600 ps to 20 s or on intermittent faults. Triggers on positive or negative pulse widths selectable from 600 ps to 20 s or on intermittent faults.
SMART Triggers State or Edge Qualified Dropout Pattern SMART Triggers® with Exc Glitch Signal or Pattern Width Signal or Pattern Interval Automatic Setup	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern. Elusion Technology Triggers on positive or negative glitches with widths selectable from 600 ps to 20 s or on intermittent faults Triggers on positive or negative pulse widths selectable from 600 ps to 20 s or on intermittent faults. Triggers on intervals selectable between 2 ns and 20 s.
SMART Triggers State or Edge Qualified Dropout Pattern SMART Triggers® with Exc Glitch Signal or Pattern Width Signal or Pattern Interval	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events. Triggers if signal drops out for longer than selected time between 2 ns and 20 s. Logic combination (AND, NAND, OR, NOR) of 5 inputs (4 channels and external trigger input) Each source can be high, low, or don't care. The High and Low level can be selected independently. Triggers at start or end of the pattern. Lusion Technology Triggers on positive or negative glitches with widths selectable from 600 ps to 20 s or on intermittent faults. Triggers on positive or negative pulse widths selectable from 600 ps to 20 s or on intermittent faults.

Oscilloscope Specifications (continued)

Probes	
Probes	A variety of optional passive and active probes is available.
Probe System: ProLink with ProBbus®	Automatically detects and supports a variety of compatible probes;
	Supports ProLink-SMA and ProLink-BNC input adapters.
Scale Factors	Automatically or manually selected depending on probe used.
Color Waveform Display	
Гуре	Color 10.4" flat-panel TFT-LCD with high resolution touch screen
Resolution	SVGA; 800 x 600 pixels
Realtime Clock	Dates, hours, minutes, seconds displayed with waveform. SNTP support to synchronize to precision internet clocks
Number of Traces	Display a maximum of 8 traces. Simultaneously display channel, zoom, memory, and math traces.
Grid Styles	Auto, Single, Dual, Quad, Octal, XY, Single + XY, Dual + XY
Waveform Styles	Sample dots joined or dots only
Analog Persistence Display	
Analog & Color-Graded Persistence	Variable saturation levels; stores each trace's persistence data in memory
Persistence Selections	Select analog, color, or three-dimensional.
Trace Selection	Activate persistence on all or any combination of traces.
Persistence Aging Time	Select from 500 ms to infinity.
Sweeps Displayed	All accumulated, or all accumulated with last trace highlighted
Zoom Expansion Traces	
	Display up to 4 Zoom and 4 Math/Zoom traces; 8 Math/Zoom traces available with
	XMAP (Master Analysis package) or XMATH (Advanced Math package).
CPU	
Processor	Intel Pentium 4 @ 2.53 GHz or better with MS Windows 2000
Processing Memory	Up to 2 Gbytes
Internal Waveform Memory	
	M1, M2, M3, M4 Internal Waveform Memory (Store full-length waveforms with 16 bits/data point)
	Or store to any number of files limited only by data storage media.
Setup Storage	
Front Panel and Instrument Status	Store to the internal hard drive, floppy drive or to a USB-connected peripheral device

Oscilloscope Specifications (continued)

Interface		
Remote Control	Via Windows Automation, or via	LeCroy Remote Command Set
GPIB Port (Optional)	Supports IEEE – 488.2	
Ethernet Port	10/100Base-T Ethernet interface	
Floppy Drive	Internal, DOS-format, 3.5" high-de	ensity
JSB Ports	4 USB ports support Windows co	ompatible devices
External Monitor Port Standard	15-pin D-Type SVGA-compatible	
Parallel Port	1 standard	
Auxiliary Output		
Signal Types	Select from calibrator or control s	signals output on front panel.
Calibrator Signal	5 Hz – 5 MHz square wave or DC Level; 0.0 to 0.5 V into 50 Ω (0–1 V into 1 M Ω), or TTL Volts (selectable)	
Control Signals	Trigger enabled, trigger out, pass	/fail status
Auxiliary Input		
Signal Types	Select from External Trigger or Ex	xternal Clock input on front panel.
General		
Auto Calibration		accuracy is maintained for 1 year minimum.
Power Requirements	100–120 VAC at 50/60/400 Hz; 20 Power consumption: < 800 VA	00-240 VAC at 50/60 Hz; automatic AC voltage selection.
Environmental		
Temperature (Operating)	+5 °C to +40 °C including floppy	disk and CD-ROM drives
Temperature (Non-Operating)	-20 °C to +60 °C	
Humidity (Operating)	5% to 80% relative humidity (nor	n-condensing) up to +30 °C. Upper limit derates to 25% relative
, , , , , , , , , , , , , , , , , , , ,	humidity (non-condensing) at +4	
Humidity (Non-Operating)	5% to 95% relative humidity (nor	n-condensing) as tested per MIL–PRF–28800F
Altitude (Operating)	up to 10,000 ft (3048 m) at or bel	low +25 °C
Altitude (Non-Operating)	up to 40,000 ft (12,192 m)	
Random Vibration (Operating)	0.31 grms 5 Hz to 500 Hz, 15 min	nutes in each of three orthogonal axes
Random Vibration (Non-Operating)	2.4 grms 5 Hz to 500 Hz, 15 minu	utes in each of three orthogonal axes
Functional Shock	20 g peak, half sine, 11 ms pulse,	3 shocks (positive and negative) in each of three orthogonal axes, 18 shocks total
Physical Dimensions		
Dimensions (HWD)	264 mm x 397 mm x 491 mm; 10	0.4" x 15.6" x 19.3" (height excludes feet)
	8620A	8300A, 8500A, 8600A
Weight	23 kg; 49 lbs.	18 kg; 39 lbs.
Shipping Weight	29 kg; 63 lbs.	24 kg; 53 lbs.
Certifications		
	CE Approved, UL and cUL listed;	
	Conforms to EN 61326-1; EN 610	10-1; UL 3111-1; and CSA C22.2 No. 1010.1
Warranty and Service		
	2 year warranty calibration recor	mmandad annually

3-year warranty; calibration recommended annually.

Optional service programs include extended warranty, upgrades, and calibration services.

Standard

Math Tools

Display up to four math function traces (F1 – F4). The easy-to-use graphical interface simplifies setup of up to two operations on each function trace, and function traces can be chained together to perform math-on-math.

absolute value average (summed) average (continuous) derivative deskew (resample) difference (-) enhanced resolution (to 11 bits vertical) envelope exp (base e) exp (base 10) fft (power spectrum, magnitude, phase, up to 25 kpts) histogram of 1000 events integral

invert (negate) log (base e) log (base 10) product (x) ratio (/) reciprocal rescale (with units) roof (sinx)/x square square root sum (+) trend (datalog) of 1000 events zoom (identity)

Pass/Fail Testing

Simultaneously test multiple parameters against selectable parameter limits or pre-defined masks. Pass or fail conditions can initiate actions including document to local or networked files, e-mail the image of the failure, save waveforms, send a pulse out at the front panel auxiliary BNC output, or (with the GPIB option) send a GPIB SRQ.

Optional

Master Analysis Package (XMAP)

This package provides maximum capability and flexibility, and includes all the functionality present in XMATH, XDEV, and JTA2.

Advanced Math Package (XMATH)

This package provides a comprehensive set of signal WaveShape Analysis Tools providing insight into the waveshape of complex signals. Additional capability provided by XMATH includes:

- 8 math traces total (4 additional)
- Parameter math add, subtract, multiply, or divide two different parameters
- Histograms expanded with 19 histogram parameters and up to 2 billion events
- Trend (datalog) of up to 1 million events
- Track graphs of any measurement parameter
- FFT capability added to include: power averaging, power density, real and imaginary components, frequency domain parameters, and FFT on up to 25 Mpts
- Narrow-band power measurements
- Auto-correlation function
- Sparse function
- Cubic and Quadratic Interpolation function

Web Editor (XWEB)

The Processing Web provides a graphical way to quickly and easily set up math functions and parameter measurements. Practically unlimited math-on-math functions can be chained together, and parameter measurements for any math output waveform anywhere on the web can be inserted.

Advanced Customization Package (XDEV)

This package provides a set of tools to modify the scope and customize it to meet your unique needs. Additional capability provided by XDEV includes

- Creation of your own measurement parameter or math function, using third party software packages, and display of the result in the scope. Supported third party software packages include:
- VBScript - MATLAB - Mathcad - Excel
- CustomDSO create your own user interface in a scope dialog box.
- · Adding macro of keys to run VBScript files
- Support of plug-ins

Measure Tools

Displays any 8 parameters together with statistics, including their average, high, low, and standard deviations. Histicons provide a fast, dynamic view of parameters and wave shape characteristics.

amplitude last @level) area level@x rms base maximum std. deviation cycles mean top delay median width ∆ delay minimum median number of points duty cycle phase time@minimum (min.) duration +overshoot falltime (90-10%, -overshoot time@maximum (max.) 80-20%, Δ time@level peak-to-peak @level) period Δ time@level from trigger

first risetime (10-90%, x@min

20-80%.

Timing Tools

LeCroy M1 Timing Tool runs inside your WaveMaster oscilloscope; acquires data; and calculates, displays, and analyzes jitter in clock and serial data. A wide variety of measurement tools are available, including differential crossing point measurements. Jitter viewing tools include line graph, histogram, jitter spectrum, text, and eye diagram. Available in an advanced or basic version.

LeCroy M1 Timing Tool (Advanced, 1 scope) LeCROY M1 / ADV-1 LeCroy M1 Timing Tool (Advanced, 4 scopes) LeCROY M1 / ADV-4 LeCroy M1 Timing Tool (Basic) LeCROY M1 / BASIC

Jitter and Timing Analysis Package (JTA2)

This package provides jitter timing and analysis using time, frequency, and statistical views for common timing parameters, and also includes other useful tools. JTA2 includes:

· Jitter and timing parameters, with "Track" graphs of

- Half Period - Cycle-Cycle Jitter - Duty Cycle - N-Cycle - Width - Duty Cycle Error - N-Cycle with start - Time Interval Error

- Setup selection - Frequency - Hold - Period - Skew

- Edge@lv parameter (counts edges)
- Histograms expanded with 19 histogram parameters and up to 2 billion events
- Trend (datalog) of up to 1 million events
- Track graphs of all parameters
- Persistence histogram, persistence trace (mean, range, sigma)

Disk Drive Measurements Package (DDM2)

This package provides disk drive parameter measurements and related mathematical functions for performing disk drive WaveShape Analysis.

• Disk Drive Parameters are as follows:

amplitude assymetry local time trough-peak local base local time under threshold local baseline separation narrow band phase local maximum narrow band power local minimum overwrite pulse width 50 local number pulse width 50local peak-peak local time between events pulse width 50+ local time between peaks resolution

local time between troughs track average amplitude local time at minimum track average amplitudelocal time at maximum track average amplitude+ local time peak-trough auto-correlation s/n local time over threshold non-linear transition shift

- Correlation function
- Trend (datalog) of up to 1 million events
- Histograms expanded with 18 histogram parameters and up to 2 billion events
