Leakage Current Tester

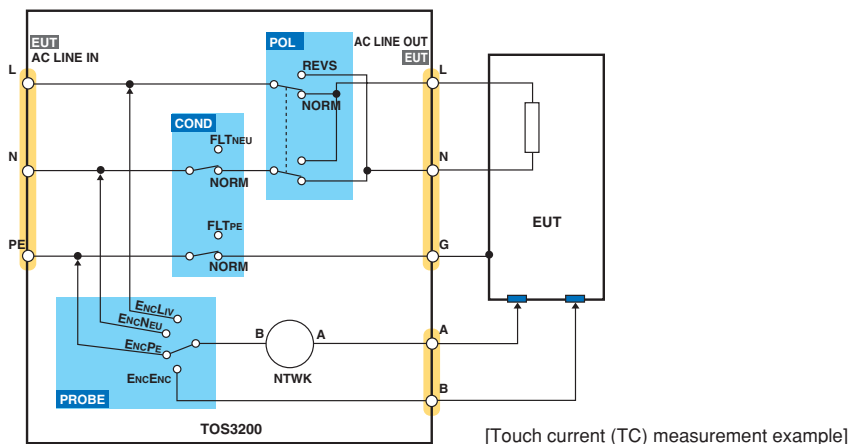

TOS3200

The Leakage Current Tester TOS3200 is designed to perform leakage current (touch current and protective conductor current) tests on general electrical equipment but not medical electrical equipment. It enables you to conduct tests that conform to the requirements of the applicable IEC, UL, JIS, and other standards, as well as the Electrical Appliance and Material Safety Law. The memory in the main unit stores the 51 types of test conditions laid down in the IEC/JIS standards for information technology equipment, household electrical appliances, audio, video electronic apparatus, luminaires, motor-operated electric tools, and electrical equipment for measurement and control and in the Electrical Appliance and Material Safety Law, thereby enabling you to conduct standard tests with simple panel operation.

● Capable of measuring leakage current in three modes

Touch current (TC) operating mode*

Enables you to measure the touch current flowing between the enclosure (accessible portion) of the electrical equipment under test (EUT) and the power line incorporating the earth wire, via a human phantom circuit. For human phantom circuits, seven measurement circuit networks (NTWKs) conforming to the applicable standards are provided as standard. The switching of the polarities of the power line to the EUT, as well as single-fault conditions, are automatically set with relays inside the tester.

Protective conductor current (PCC) operating mode*

Enables you to measure the current flowing through the protective conductor (earth wire) by connecting the power plug (NEMA5-15 or an equivalent) of an item of 100 V electrical equipment to the socket on the front panel. A multi-outlet is available as an option (sold separately) to accommodate the different plugs used around the world.

Meter (METER) operating mode

In the same way as an ordinary multimeter, enables you to measure voltage and current using measurement terminals A and B on the front panel. For voltage measurement, it offers a “safety extra low voltage” (SELV) detection function; for current measurement, it offers a measurement function using measurement circuit networks (NTWKs).

* TC=Touch Current
PCC=Protective Conductor Current

● Seven built-in measurement circuit networks

It offers built-in seven measurement circuit networks (NTWKs) for measuring the touch current of general electrical equipment.

● Measurement circuit network (network A)

● Measurement circuit network (network B)

● Measurement circuit network (network C)

● Measurement circuit network (network D)

● Measurement circuit network (network E)

● Measurement circuit network (network F)

● Measurement circuit network (network G)

● Rear panel

● Up to 30 mA for RMS measurement

Capable of measuring 30 μ A to 30 mA for DC/RMS measurement and 50 μ A to 90 mA for PEAK measurement, both in three ranges. Two range switching functions are provided, namely, a fixed range function (FIX) and auto range function (AUTO), which conform to the current to be measured.

For RMS measurement, the “true root-mean-square value” is achieved.

● Easy-to-understand operation

Simple operation is possible thanks to the intuitively understandable test condition menu and the function keys/rotary knobs.

[Setting screen for touch current (TC) measurement]

● Enables the continuous execution of tests

Allows you to automatically conduct TC and PCC tests as a single sequence program by setting their test conditions as up to 100 independent tests (steps). You can set up to 100 sequence programs, with up to 500 steps in total.

[Setting screen for auto tests]

● Capable of saving test results

For independent tests, enables you to save not only test results but also the test date and time and the test conditions for up to 50 tests; for auto tests, you can save this data for up to 50 programs. You can also save the test results as external records using the USB and other interfaces.

● 51 types of standard test conditions are preset

The memory in the main unit is pre-written with 51 types of test conditions for general electrical equipment, which conform to IEC 60990 and the standards listed below. You can set the standard test conditions merely by calling them.

[Standards covered by the memory]

Standard No.	Applicable electrical equipment
IEC60950	Information technology equipment
IEC60335	Household and similar electrical appliances
IEC60065	Audio, video and similar electronic apparatus
IEC60745	Hand-held motor-operated electric tools
IEC60598	Luminaires
IEC61010	Electrical equipment for measurement, control, and laboratory use
Electrical Appliance and Material Safety Law	Electrical appliances
IEC61029	Transportable motor-operated electric tools

● Lets you manage the calibration time limit

You can set a calibration time limit in the tester, such that when this time limit is exceeded, a warning message appears or the use of the tester is restricted. This is a new feature whereby the tester itself conducts calibration management.

● USB interface provided as standard

In addition to the SIGNAL I/O, GPIB, and RS-232C interfaces, a USB interface is also provided as standard.

● Range of other functions

- “MAX function,” which retains the largest current measured.
- “CONV function,” which converts the measured current value into the corresponding value for the preset power voltage.
- “SELV function,” which causes the DANGER lamp to turn ON if a preset safety extra low voltage (SELV) is exceeded in meter measurement mode.
- “CHECK function,” which performs self-analysis of the measurement circuit networks.
