

# Optical Spectrum Analyzer AQ6331

A compact, lightweight, portable optical spectrum analyzer for DWDM system installation and maintenance.

**GP-IB**

# Compact, lightweight and high-spec!

The AQ6331 is a new portable optical spectrum analyzer (OSA) offering the advanced performance required for 50 GHz DWDM network testing, in both C-band and L-band.

The compact body of the AQ6331 houses all the features required for DWDM system evaluation.

Further, the AQ6331 presents excellent wavelength resolution, with accuracy and dynamic range equal to conventional bench-top OSAs for research and development applications.

The AQ6331 is an optical spectrum analyzer that can be used not only for installation and maintenance of DWDM systems, but also in research and development applications.

## Features

### ● Compact and lightweight

Approx. 315 (W) x 200 (H) x 225 (D) mm and only 10 kg., yet offers a light source for wavelength calibration and printer as standard.

### ● High wavelength accuracy

Provides  $\pm 0.02$  nm wavelength accuracy at 1520 to 1580 nm, and  $\pm 0.05$  nm at 1580 to 1620 nm, assuring wavelength accuracy of C-/L-band with an internal light source for wavelength calibration.

### ● Internal wavelength calibration function

Wavelength calibration is carried out without using an external light source due to a built-in reference light source. Optical fiber connection for calibration is unnecessary because connection to the reference light source occurs automatically, through an internal optical switch.

### ● High dynamic range and high wavelength resolution

Dynamic range is 55 dB or more (peak  $\pm 0.4$  nm) and wavelength resolution is 0.05 nm (min.), enabling measurement of DWDM systems of 50 GHz spacing.

### ● High power measurement

Optical amplifier output and high output laser diodes in DWDM systems can be measured directly because the range of measurement level is +20 dBm.

### ● Low polarization dependency

Can accurately measure optical amplifier gain, etc., because polarization dependency is as low as  $\pm 0.05$  dB.

### ● Long-term analysis function

Can monitor changes to each DWDM channel peak over time.

### ● Convenient programming function

Shortens measurement time because measurement conditions and processes, etc., can be input to memory prior to measurement.

### ● Individual trace of three waveforms

Displays individual traces of three waveforms. Can also compare two waveforms — a reference waveform and a measurement result — to determine the difference between the two waveforms.

### ● Internal high-speed printer

### ● 8.4-inch large display

# Applications

## ● DWDM analysis function

The AQ6331 can simultaneously measure up to 100 channels of DWDM signals.

- Peak wavelength (WAVELENGTH) of each channel, peak power level (LEVEL)
- Offset wavelength to the reference channel peak (OFFSET WL), level difference (OFST LVL)
- Noise level (NOISE) of each channel, difference between peak level and noise level (SNR)

## ● Long-term function

Sweeps at selected intervals and stores the results of DWDM analysis (peak wavelength, peak level and SNR of each channel). This function enables long-term monitoring for changes within each WDM channel.

## Measurement process of optical spectrum analyzer in DWDM systems

## ● Optical fiber amplifier (EDFA) evaluation

The ASE interpolation method is used to facilitate the measurement of gain NF (Noise Factor) and key parameters for optical fiber amplifier.

## ● Characteristic evaluation of optical passive devices

In conjunction with the ASE light source, wideband light source, etc., users can establish a very powerful system for the evaluation of passive devices.

# Applications

## ● Various parameter evaluations of LED, FP-LD and DFB-LD

SMSR (Side-Mode Suppression Ratio) of LED, FP-LD and DFB-LD. Parameter evaluations such as Side-Mode Suppression Ratio, etc., can be obtained easily.

## ● Programming function

Fully programmable operation enables the setting of measurement conditions such as wavelength sweep width, resolution, various analysis functions, print output and data storage to floppy disk.

This built-in function helps eliminate complicated installation and maintenance procedures, enhancing work efficiency.
