Complete Pulse Power Characterization

The HP 8990A and HP 8991A peak power analyzers provide complete and accurate characterization of today's complex pulsed signals. They are capable of performing seven automatic timing measurements (rise time, fall time, pulse width, PRI, PRF, duty cycle, and delay) and five automatic power measurements (peak power, average power, pulse top/base amplitude, and overshoot) with push-button ease. Front-panel operation is intuitive and straightforward. Data entries can be typed in or made with the front-panel knob; automatic measurements are made with simple keystrokes.

The HP 8990A and 8991A offer two sensor channels plus two external triggering/oscilloscope channels, allowing the simultaneous measurement of modulating signals and detected power envelopes. Powerful measurement and display routines put you in control of your most demanding pulse applications. Measurement statistics, high-speed/high-sensitivity triggering, amplitude and time markers, dual-timebase windowing, measurement limit test, waveform storage, and waveform math are some of the new capabilities featured in the HP 8990A and 8991A.

The HP 8990A is optimized for linear display applications, and better rise/fall times than the HP 8991A. The HP 8991A is optimized for log display applications, providing higher resolution power measurements and improved power accuracy (when used with the HP 84815A sensor) than the HP 8990A. In addition, the HP 8991A is priced significantly less than the HP 8990A.

The peak power analyzers are compatible with the HP 84812/13A/14A/15A peak power sensors. These sensors give you outstanding measurement accuracy in demanding situations and include automatic temperature sensing and correction. The HP 8992 digital video power analyzer is very important for digital transmission applications. The HP 8992A's ability to characterize random peak power events make it possible to monitor receiver headroom and digital modulation quality.
