AWG5000B Series (AWG5014B • AWG5012B • AWG5004B • AWG5002B)

AWG5000B Series.

The AWG5000B Series of Arbitrary Waveform Generators Delivers the Industry's Best Mixed Signal Stimulus Solution for Today's Complex Measurement Challenges

The AWG5000B Series of Arbitrary Waveform Generators delivers the optimal combination of industry leading sample rate, vertical resolution, signal fidelity and waveform memory length, all in an easy to use self contained package. The series offers the industry's best solution to the challenging signal stimulus issues faced by designers verifying, characterizing and debugging sophisticated electronic designs.

Meeting the needs of today's design engineers, the series provides excellent signal dynamic range and integrity. AWG5000B Series models, with a 14-bit DA converter based sample rate from 600 MS/s to 1.2 GS/s, 2 to 4 output channels, synchronized 4 to 8 digital marker outputs and 28 channels of digital data outputs, easily solve the toughest measurement challenges in wireless base band I/Q communications, digital consumer product design such as imaging devices, data conversion equipment and semiconductor design and test.

The open windows (Windows XP) based instruments are easy and convenient to use and connect easily with peripherals and third party software.

Wireless I/Q and IF Signal Generation

Tektronix AWGs support "Wireless Everywhere" by enabling the latest Digital RF technology, increasing wireless network capacity and delivering the performance that supports higher modulation bandwidth and modulation schemes.

The AWG5000B Series' 1.2 GS/s, (600 MS/s), with enough signal dynamic range and SFDR via 14-bit vertical resolution meets Narrowband IQ applications to broadband IF applications. The AWG5000B is able to generate not only analog IQ/IF signals, but digital data IQ/F. The MIMO (Multiple Input Multiple Output) system that supports W-LAN/Wi-Max using space-multiplex with multiple antennas is a leading edge technology for reliable and faster data rate communication. The AWG5000B Series generates up to four analog channels (8 channels via two instruments) to simultaneously generate MIMO signals. The series can generate two pairs of IQ signals (4-pairs with two instruments) as an IQ generator and four pairs of IF signals (8-pairs with two instruments) as an IF generator. With the two channels models, CH 1 and CH 2 digital data output is available as an option.

Spurious Performance

The 14-bit vertical resolution and sophisticated design of the AWG5000B Series provides ample signal dynamic range and purity. The SFDR performance is 80 dBc for 1 MHz signal and 64 dBc for 10 MHz signal.

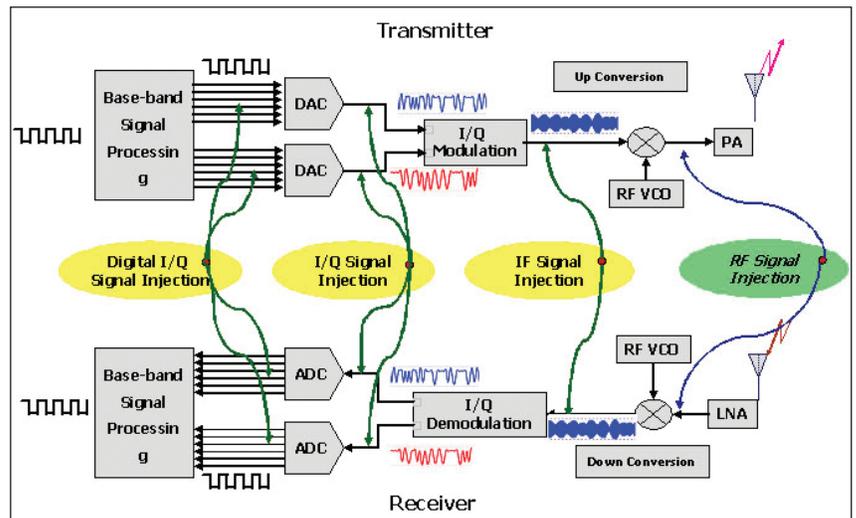

Multi-level Logic Signal

One technique to increase the data rate without increasing the transition rate is applying multi-level signals, wherein a signal can assume more than the standard binary two levels. In multi-level signaling, one can think of multi-level discrete amplitudes of a signal. This phenomenon is known as pulse amplitude-modulation or PAM. A 9PAM signal, a signal with 9 different amplitudes, increases the data rate by four without increasing the transition rate of the signal.

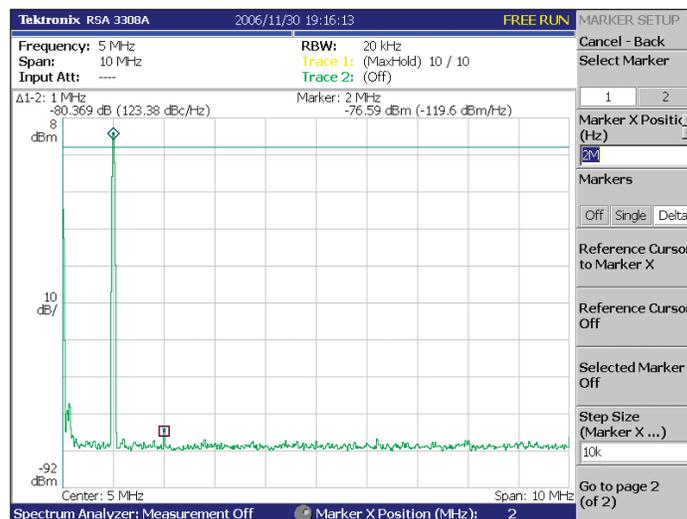

The AWG5000B Series enables you to test your latest design by generating any kind of mixed or multi-level signal.

Mixed Signal Generation

AWG5012B and AWG5002B models can generate two analog signals with four digital marker outputs, supporting 28 digital outputs (CH 1 and CH 2 data) as an option. They deliver a mixed analog and digital signal generator and the most versatile solution for a broad range of applications, including consumer electronics such as ADC/DAC converter and imaging or display devices.

Additional Software Application Tools to Extend Waveform Generation

RFXpress® (RFX100)

RFXpress is a software package that synthesizes digitally modulated base band IQ and IF signals. It takes IQ and IF signal generation to the next level and fully exploits the wideband signal generation capabilities of Arbitrary Waveform Generators (AWGs). Supporting a wide range of modulations, as well as the symbol map functions, the software allows you to define your own modulation.

RFXpress is a powerful easy to use software package to synthesize IQ and IF signals for arbitrary waveform generators (AWG). It runs as an integral part of the AWG5000B series arbitrary waveform generators or from an external PC. For more details on RFXpress visit www.tek.com.
